U. S. Patent and Trademark Office PTO-326 (Rev. 9-97) Application/Control Number: 08/684130 Page 2

Art Unit: 2773

DETAILED ACTION

1. This application has been examined.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

- 3. Claims 1-4, and 19-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Scholl et al (5742762).
- 4. Regarding claim 1, Scholl shows in Figures 3, 4, 5, column 4 lines 1-65, column 5 lines 20-68, column 6 lines 30-68, column 7 lines 1-47, and column 8 lines 12-68, a network device with multi-layer management interface with: a first interface layer configured to receive a first set of messages from a first set of sources according to a first protocol, send a second set of messages according to a second protocol in response, and send responses to the first set in the first protocol; a second interface layer configured to receive a third set of messages (including second set messages) from a second set of sources (including the first layer) according to the

Art Unit: 2773

second protocol, update configuration data in response to the third set, and send responses to the third set according to second protocol.

- 5. Regarding claims 2-4, the protocols include HTTP and SNMP. The interface layers include SNMP manager and agent.
- 6. Regarding claims 19-27, these show the same features as described above. In addition, note that the Hypertext Markup Language document includes information identifying a Management Information Base (MIB) object. The first software layer receives user input that specifies a change to configuration data by detecting when the user selects an interface component associated with the anchor. The messages and data correspond to the MIB. For each entry associated with the MIB object, Hypertext Markup Language text is generated to cause the client to display information contained in the entry. The object identifier is used to search the files generated from a MIB that contains the MIB object. A query is transmitted to the third software layer to retrieve a current value associated with a second MIB which is identified in the entry. The HTTP client displays the second MIB object and current value. An anchor is generated that uniquely identifies the second MIB object. New values are transmitted and updated. arguments is read and used to form a template HTML page and anchor including a command and identifier. The client HTTP message identifies a row in a MIB table. The information and values to determine a type of each MIB variable is read and requested and displayed.

Art Unit: 2773

7. Claims 5-18 are allowable over the prior art of record. These bring out the three distinct software layers and specific techniques of embedding information and communicating between the clients and servers.

- 8. Applicant's arguments filed have been fully considered but they are not persuasive. Scholl does show the multilayer management interface configured for different protocols in the aforecited passages. The comments of the International Preliminary Search Examination are taken into account in further examination and in light of applicants' response, and the three layer software system, as brought out in the claims 5-18, have the rejection removed.
- 9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
